

USER ACCEPTANCE TEST

UAT

User Acceptance Testing is performed to verify whether the completed project satisfies the required functionality.

Test Case 1

Test: Upload employee source file.

Expected Result: Employee data should be successfully imported into the Import Set.

Test Case 2

Test: Verify Import Set records.

Expected Result: Source employee records should be displayed correctly.

Test Case 3

Test: Verify field mapping.

Expected Result: Source values should appear in their corresponding target fields.

Test Case 4

Test: Execute Transform Map.

Expected Result: Employee records should be created or updated in the target table.

Test Case 5

Test: Verify final records.

Expected Result: Employee information should be displayed correctly in the target table.

Test Case 6

Test: Check import/transform errors.

Expected Result: Failed or skipped records should be identifiable from the import/transform results.
